DETAILED ACTION

Page 2

Specification

1. The abstract of the disclosure is still objected to because it must be submitted in a **separate sheet** as well as the remarks. Applicant should recognize that the Abstract of the invention and the Remarks can **not** be on the same page. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claim 1-3, 5, 7-10 & 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Evans (U.S. 5,614,884) in view of Tan (U.S. 6,043,740).

Regarding claim 1, Evans teaches a vehicle turn signal device [figs.1,6, col.2, lines 28-34 and col.8, lines 13-39] comprising:

- a human operated signal initiation device (36,16) [figs.1,6, col.2, lines 28-34, col.7, lines 62-65 and col.8, lines 13-39];

- a flasher (76) is connected to light indicators for flashing (40,42,52-62) [figs. 1-2,5-6, col.1, lines 40-52, col.2, lines 39-49 and col.4, lines 11-22, col.7, lines 40-48 and col.8, lines 24-39];

- at least a delay device / timers (88-94) communicate with the flasher and circuit of turn signal for flashing short duration (15 second) and long duration (70 second) of turn signals as the driver operator activated the control stalk (36,160) [figs. 1-2, 5-6, col.7, lines 40-48, col.7, lines 62-67 and col.8, lines 13-39].

The references of Evans does not specifically mention the circuit causes the vehicle turn signal to operate in a combination of long and short light signals as claimed by the applicant.

A flasher device includes a circuit which can be programmed to produce a desired sequence of short and long flashes by manufacture / company without the use of mechanical devices.

Furthermore, Tan teaches vehicle signaling apparatus comprises a circuit to operate the light signals which is shown in fig.2 as waveform shows a first of two pulses followed by a short delay, less than 3 seconds, followed by a second pulse train of four pulses, followed by a long delay [fig.2, col.1, line 56 to col.2, lines 6].

Therefore, it would have been obvious to one having ordinary skill in the art to have the teaching of Tan in the system of Evans for providing at least two indication signals as long and short light signals to the on coming traffic and pedestrians.

Art Unit: 2636

Regarding claims 2-3, Evans teaches the delay device / timers (88-94) communicate with the flasher and circuit of turn signal for flashing short duration (15 second) and long duration (70 second) of turn signals as the driver operator activated the control stalk (36, 160) [figs. 1-2, 5-6, col.7, lines 40-48, col.7, lines 62-67 and col.8, lines 13-39].

Regarding claims 5 & 7, The reference of Evans & Tan do not specifically disclose exactly term as the circuit causes the vehicle turn signal to operate in a repeat series of two short light signals followed by one long light signal, with short delays after the short light signals and long delay after the long light signal as claimed by the applicant.

A flasher device includes a circuit which can be programmed to produce a desired sequence of short and long flashes by manufacture / company without the use of mechanical devices.

Furthermore, Tan teaches vehicle signaling apparatus comprises a circuit to operate the light signals which is shown in fig.2 as waveform shows a first of two pulses followed by a short delay, less than 3 seconds, followed by a second pulse train of four pulses, followed by a long delay [fig.2, col.1, line 56 to col.2, lines 6].

Therefore, it would have been obvious to one having ordinary skill in the art to utilize the teaching of Tan in the system of Evans to provide more safety as a multi sequence indication signals to the on coming traffic and pedestrians.

Regarding claim 8, Evans teaches a vehicle turn signal device [figs. 1 ,6, col.2, lines 28-34 and col.8, lines 13-39] comprising:

Application/Control Number: 10/687,028

Art Unit: 2636

- a human operated signal initiation device (36,16) [figs.1,6, col.2, lines 28-34, col.7.

lines 62-65 and col.8, lines 13-39];

- a flasher (76) is connected to light indicators for flashing (40,42,52-62) [figs. 1-2,5-6,

col. 1, lines 40-52, col.2, lines 39-49 and col.4, lines 11-22, col.7, lines 40-48 and col.8,

lines 24-39];

- at least a delay device / timers (88-94) communicate with the flasher and circuit of turn

signal for flashing short duration (15 second) and long duration (70 second) of turn

signals as the driver operator activated the control stalk (36,160) [figs. 1-2, 5-6, col.7,

lines 40-48, col.7, lines 62-67 and col.8, lines 13-39].

Regarding claims 9-10, Evans teaches the delay device / timers (88-94) communicate with the flasher and circuit of turn signal for flashing short duration (15 second) and long duration (70 second) of turn signals as the driver operator activated the control stalk (36, 160) [figs. 1-2, 5-6, col.7, lines 40-48, col.7, lines 62-67 and col.8, lines 13-39].

Regarding claim 12, The reference of Evans & Tan do not specifically disclose exactly term as the circuit causes the vehicle turn signal to operate in a repeat series of two short light signals followed by one long light signal, with short delays after the short light signals and long delay after the long light signal as claimed by the applicant.

A flasher device includes a circuit which can be programmed to produce a desired sequence of short and long flashes by manufacture / company without the use of mechanical devices.

1 1 1 1 1 0000

Art Unit: 2636

Furthermore, Tan teaches vehicle signaling apparatus comprises a circuit to operate the light signals which is shown in fig.2 as waveform shows a first of two pulses followed by a short delay, less than 3 seconds, followed by a second pulse train of four pulses, followed by a long delay [fig.2, col.1, line 56 to col.2, lines 6].

Therefore, it would have been obvious to one having ordinary skill in the art to utilize the teaching of Tan in the system of Evans to provide more safety as a multi sequence indication signals to the on coming traffic and pedestrians.

4. Claims 4 & 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Evans (U.S. 5,614,884) in view of Tan (U.S. 6,043,740) further in view of Boxer (U.S. 5,731,755).

Regarding claims 4 & 11, The references of Evans & Tan do not specifically mention the circuit causes the vehicle turn signal to operate in a series of light signal and delays as claimed by the applicant.

However, Boxer teaches vehicular U-turn indicator having a series of sequentially illuminated lights (12, 14,32A) which can be activated by a driver operator as providing a clear indication signal to the on coming traffic and pedestrians [figs.1,3, col.3, lines 13-32, col.4, lines 9-14 and abstract].

Therefore, it would have been obvious to one having ordinary skill in the art to employ the teaching of Boxer includes a feature of series of light signal and delays in

Application/Control Number: 10/687,028

Art Unit: 2636

the system of Evans & Tan to provide a series of indication signals and contributing

Page 7

more safety to the on coming traffic and pedestrians.

Arguments & Responses

5. Applicant's arguments filed on Oct. 17, 2005 have been fully considered but they

are moot in view of the new ground(s) of rejection.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Hung T. Nguyen whose telephone number is (571) 272-

2982. The examiner can normally he reached on Monday to Friday from 8:00 am to

5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Hofsass, Jeffery can be reached on (571) 272-2981. The fax phone number

for this Group is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the Group receptionist whose telephone number is

(703) 305-4700.
